

DENSO

**Cabin Air Filter
for Every Mile.**

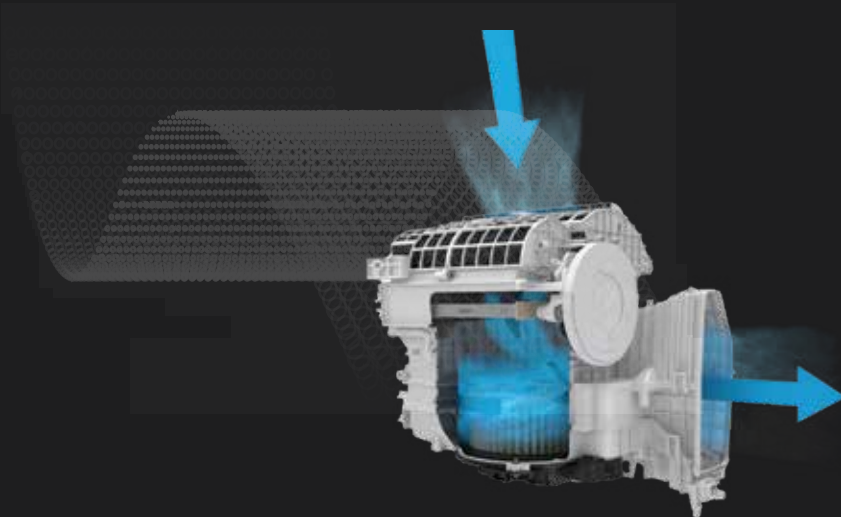

Pure Air by DENSO

Breathe easy on the road with DENSO Cabin Air Filters, designed to eliminate smells, irritants, and pollution from your car's air. As a global leader in A/C Systems with over 50% European market share, DENSO ensures top-quality filters that block dust, fumes, pollen, and odors, providing a cleaner, healthier journey every time.

Why Replace Your Cabin Air Filter?

- Replace your Cabin Air Filter every 10-15,000 km, annually, or as recommended by your vehicle's manufacturer to keep the air fresh and safe.
- Over time, filters collect dust and dirt, which can cause allergies and discomfort by harboring mildew and bacteria.
- Neglecting to change a dirty filter reduces air quality and can harm your car's air conditioning performance.

DENSO A/C System

Cabin Air Filters are part of the A/C System
designed by DENSO

The DENSO Range.

Three advanced technologies.

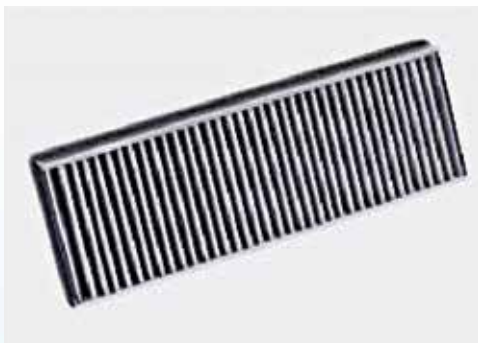

Particle Filters

DENSO Particle Filters use high-quality non-woven fabric to remove major pollutants like dust, soot, lead, sulphates, and exhaust particles, ensuring a cleaner, safer in-car environment by trapping particles as small as a few microns.

Combination Filters

DENSO Combination Filters enhance particle removal with an added layer of activated charcoal, capturing 25% more pollutants and eliminating harmful gases and odors for a fresher cabin air experience.

ClearAir+ Filters

ClearAir+ features advanced five-layer filtration to protect against pollen and pollutants, eliminating 99% of viruses and bacteria and providing purified air with no contamination from dust, gases, odors, or allergens.
